pellet certification

Recognition of the technology for Small-scale delivery

V.1, MARCH 2023

Recognition of the technology for small-scale delivery

Introduction

The ENplus® ST 1001:2022 establishes a mechanism for the recognition of the **technologies for small-scale delivery of bulk pellets**. This mechanism allows objective based evaluation and approval of the technologies. This document only includes technologies that are approved for **countries outside Germany**. DEPI (German Pellets Institute) is responsible for the approval of the technologies in Germany.

According to 6.2.3.4a the ENplus® International Management has to publish a list of approved technologies per country.

Technologies that are not included in this document have to be submitted to the ENplus® International Management for approval based on 6.2.3.4b that allows an ad hoc approval of a specific technology based on their previous testing.

ENplus® ST 1001:2022: ENplus® requirements for approval of technologies for small-scale delivery

6.2.3.4 The **trader** with **small-scale deliveries** of **bulk pellets** to end-users shall ensure that the construction and technology of the **transport vehicle** prevents a significant increase of fines. The **trader** shall ensure that the construction and the technology of the used **transport vehicles** is:

- a) approved by **ENplus® International Management** for the use in countries outside Germany and by **DEPI** for the use in Germany; or
- b) tested in accordance with relevant testing protocols. Both the testing protocols and the testing results shall be approved by **ENplus® International Management** for the use in countries outside Germany and by **DEPI** for the use in Germany.

NOTE: The use of the technology of the **transport vehicle** and its approval always refers to the country in which the pellet delivery takes place.

LIST OF APPROVED TECHNOLOGIES

Technology name	Technology description	Country of application
Truck with a pressurised silo	Pneumatic delivery of pellets by pressurised air from the silo of the truck to the customer storage.	All countries except Germany
Vehicles equipped with an auger and/or a rotary feeder	Trucks equipped with an auger and/or a rotary feeder to supply pellets in a pneumatic feeding system.	France, Italy, Spain, UK

We are a world-leading, transparent, and independent certification scheme for wood pellets. From production to delivery, we guarantee quality and combat fraud along the entire supply chain.
